OMCS CLASS

Overseas Marine Certification Services

Overseas Marine Certification Services (OMCS CLASS) is a leading ship classification society. We provide a critical link in the marine risk management chain by serving as an independent institution operating between ship owners, builders, financiers, underwriters, flag administrations, and vessel charterers.

Our goal is to safeguard the preservation of life, property, and the marine environment while ensuring that vessel operators have the flexibility to maximize their resources.

We maintain independent technical requirements for the design, construction, and survey of ships and marine facilities. These requirements incorporate the latest methods, tools, and techniques to ensure that we provide the most efficient and thorough service while keeping costs to you at a minimum.

What We Believe

At OMCS CLASS, we realize that every vessel operator has unique needs. We work with you to provide the expertise you need, not the overhead you don't. As the international maritime community moves toward uniform standards and safety equivalencies, we still value the personal relationship over a one-size-fits-all approach.

It is often said that classification societies live on their reputations. We have developed an unparalleled standing throughout the maritime industry for providing reliable, quality-oriented services. We consistently review our operating activities to ensure continuous improvement. Further, we believe in operating as a transparent organization open to external review.

Our Technology

We are devoted to providing leadership in the implementation of new technologies to protect life, property, and the marine environment, using the best tools and techniques in the industry. We do this by maintaining in-house, managerial and technical support as well as research staff. Our dedicated professionals ensure that you have access to world-class survey procedures and technologies, and our cutting-edge online database provides you real-time status of your compliance condition.

A Risk Management Company

Ship Classification

Classification is a comprehensive verification service assuring that a set of requirements laid down in rules and standards established by the classification society are met during design and construction, and maintained during operation. The rules and standards are aimed at ensuring safety against hazards to the ship, personnel, and against hazards to the environment.

Our high standards of service ensure that all of our registered vessels comply with applicable requirements and regulations. We work in cooperation with the Flag Administrations and Port State Controls with the underlying objective of maintaining safer ships and cleaner seas.

Statutory Certification

Statutory Certification has a lifetime perspective for each vessel, from initial certification in connection with the delivery, through annual, intermediate, and renewal surveys during the operational life of the vessel. OMCS CLASS accomplishes this through our global network of exclusive surveyors strategically located on all major ports and by verifying the vessel's compliance with international and national statutory regulations through the necessary technical reviews, audits, and surveys for statutory certification.

Advisory & Consultancy

OMCS CLASS provides a wide range of advisory and consulting services within commercial, operational, and technical management for the maritime industry.

We have partnered with some of the most respected organizations in the maritime industry to offer you a full range of advisory and consultancy services. We leverage our global network of surveyors and highly experienced management team to provide you with the service you need, not the overheads you do not.

Our consultancy services offer practical solutions that help you understand the risks to your business and improve performance above and beyond basic compliance. When you work with us, you benefit from some of the world's finest marine experience and an organization dedicated to delivering the best customer service.
